CelsiusPro expands its consulting services – Lea Mueller is appointed as the new head of consulting

CelsiusPro strengthens its consulting team with Ms. Lea Mueller and expands its advisory services. As an expert in the field of climate change adaptation strategies, Lea will complete the company's offerings to provide end-to-end services and solutions for climate insurance to public institutions and private companies.

The Swiss Insurtech company CelsiusPro specializes in providing parametric insurance solutions and advisory services to mitigate the risks of adverse weather and natural disasters. CelsiusPro has handled more than 2000 assignments for over 500 clients in more than 50 countries. In addition to its technical skills, proprietary platforms and pricing tools, CelsiusPro provides a broad array of industry-specific consulting services. In order to expand and strengthen its consulting services, CelsiusPro has recently reinforced its team with Ms. Lea Mueller as head of consulting.

Lea has more than eight years of experience in index insurance and natural catastrophe modelling. Previously she worked for Swiss Re's Public Sector Solutions to create tailored insurance solutions for the public sector. As an expert in the field of climate change adaptation strategies, her work included quantifying the current and future cyclone risks for the city of New York and identifying the most powerful adaptation measures. Lea holds a Master of Science in Environmental Engineering from the Swiss Federal Institute of Technology.

Lea and her team advise clients in the public and private sectors on climate, agricultural and natural catastrophe risks worldwide in order to increase the resilience of communities and businesses. «With the climate changing to unprecedented extremes, making your community resilient and absorbing shocks with insurance has never been more important», explains Lea.

CelsiusPro

Her team also manages the Technical Assistance Facility of the InsuResilience Investment Fund to protect local communities and small businesses from extreme weather and climate change.

CelsiusPro's clients include national and regional governments, agricultural ministries, development organizations, consulting firms, re/insurance companies, brokers, and businesses (SMEs, corporations and farmers). The company's experience, technology and know-how allow for the coverage of the entire value chain from identifying insurance gaps and feasibility studies, to product development and underwriting and implementation. Additional services include process digitalization and education services, confirming CelsiusPro's status as a full-service provider for climate insurance.

Lea emphasizes that CelsiusPro is an Insurtech company: «We use big data for risk analysis and insurance product design. We also provide our cutting-edge insurance platform to our clients to efficiently manage large-scale micro insurance schemes and enable distribution to critical mass.» CelsiusPro pools all stakeholders, such as decision-makers, donors, policyholders, re/insurers and brokers to bring country wide insurance schemes to life.
